

Working closely with the
San Francisco Department of Public Health and the
California Department of Social Services, we are
committed to safe resident social interaction, activities,
and communal dining, while preventing the spread of
COVID-19 and the Omicron variant.

Among our
community-wide prevention tools:

- 24/7 health services staff
- rapid and PCR testing availability
 - N95 fit testing
- vaccination status and symptom screening for everyone entering the community, every day
 - 100% vaccination rate of both staff and residents
- personal protective equipment reserves

Vaccinations

Our community is vaccinated.

98% of Residents chose to have their first
vaccination and over 90% of staff.

Vaccinations are legally voluntary and some who
wanted to have it could not due to their
medical condition.

Staff/Screening

All employees are screened for COVID symptoms and have their temperature checked when they arrive for the start of their shift.

Action

If any symptoms are identified or if the employee has a fever, they are sent home and instructed to follow up with their manager.

An alert is automatically sent to Human Resources if an employee is flagged by the system.

Employees who have any COVID type symptoms are required to have a COVID test and stay home for 10-14 days from the onset of symptoms.

Negative, symptomatic employees will be required to stay out for 14 days.

Positive, symptomatic employees must stay home for at least 10 days from the onset of symptoms.

Positive, asymptomatic employees must stay home for 10 days from the date of their positive COVID test.

Residents/Screening

Assisted Living residents are screened for COVID symptoms and have their temperatures checked and logged daily.

Memory Care residents are screened for COVID symptoms, have temperatures checked, and O2 saturation checked twice daily due to inability to accurately self-report symptoms.

Action

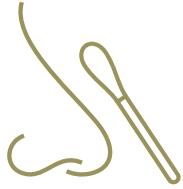

Symptom checks (plus full vital signs) are increased to 2x daily for two weeks following their return to RGP if a resident has been out of the building overnight.

If a resident is COVID positive, their vital signs are checked every 4 hours.

If a resident's oxygen saturation drops below 92% for two readings, the resident's primary care physician will be notified.

If a COVID positive resident oxygen saturation drops to 90% (or lower) or their temperature reaches 102° (or higher) they will be transferred to the emergency room to receive medical attention.

If the resident is receiving hospice services, the hospice nurse will be notified of these changes.

Testing

Weekly COVID testing for all RGP staff. All residents will be encouraged to test weekly if they wish.

All staff are encouraged to test in-house weekly. A minimum of 25% of staff will be tested each week per CDSS guidelines.

In-house testing is facilitated twice weekly for Health Services staff; goal is to test all Health Staff twice weekly.

Residents who return from an overnight trip out of the community, whether to the hospital or a family stay, will be tested for COVID and quarantined upon their return.

If there is a positive in the community: All staff and residents will be tested as soon as possible following a confirmed positive case of COVID and every 7 days thereafter until no new positives for two consecutive rounds.

PPE

Personal Protection Equipment

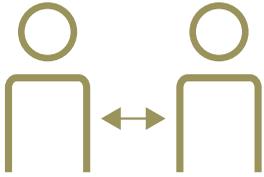

All staff must wear masks while they are onsite, except during mealtimes.

Staff members are provided with surgical masks to wear while they are onsite.

Health Services staff wear KN95 masks for any resident that is not actively COVID positive due to the close contact involved with activities of daily living (ADL), such as medication management, etc.

Gloves must be worn during all personal care, regardless of COVID status.

Care staff switch to N95 masks and face shields if a positive case is identified in the community. Gowns and gloves are also utilized if caring for a positive resident or suspected positive.

Physical Distancing

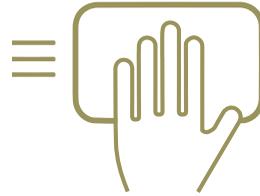

Clear markers for physical distancing are throughout the community, common spaces have been marked to help promote physical distancing as much as possible.

Elevators are limited to two passengers at a time.

Chairs in Programming room and Dining room are separated 6' feet apart with markings on the floor to ensure they aren't moved.

Staff have staggered breaks to minimize the number of people taking breaks at the same time.

Multiple spacious break areas are designed to minimize close contact while eating.

Cleaning

RGP Housekeeping and Maintenance staff were quick to identify the early threat of COVID prior to county shelter in place orders and have implemented a rigorous cleaning protocol.

High touch surfaces in the building are disinfected at least 4x daily using CDC approved cleaning products.

RGP utilizes CDC approved electrostatic foggers every evening to help clean hallways and office spaces.

Hand sanitizer is made available throughout the building including outside every elevator, at all entrances, in every office, inside laundry rooms, and in all bathrooms.

- Reminders to practice frequent hand hygiene are posted throughout the building.
- Resident apartments are cleaned weekly.

Education

Educational resources are posted throughout the building reminding staff and residents of various best practices in which the entire community should engage.

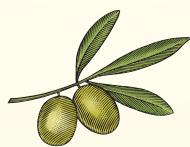

Handwashing reminders posted in all common bathrooms and by all hand sanitizer dispensers.

COVID best practice guides are posted in the hallways on all floors as a reminder to residents and staff.

Residents receive frequent reminders from management to report any potential COVID symptoms with symptoms clearly listed for reference.

Residents and families receive frequent communication to reflect the current, changing protocols by the State of CA, City of San Francisco, Dept. of Social Services, and the Dept. of Public Health.

Thank you.
